

Demand Side Output
The Demand Side "supplies" the economy with:

- economic activity (usage)
- protocol revenue
- deflationary pressure
- positive real returns via scarcity
- price support

Demand-Side Feedback Loop

1. Users create external demand
2. ED → D_eff (internal realized demand)
3. D_eff → PS (actual consumption)
4. Usage → R_protocol
5. Revenue → S_burn
6. Burn → RR
7. RR → MP
8. MP → Service Cost Expectation → ED
